Focused on ceramics' expertise

RAK Ceramics is one of the largest ceramic brands in the world, specializing in ceramic and gres porcelain wall and floor tiles, tableware, sanitary ware and faucets. With the capacity to produce 118 million square meters of tiles, 5.7 million pieces of sanitary ware, 36 million pieces of porcelain tableware and 2.6 million pieces of faucets per year, RAK Ceramics operates 23 state-of-the-art plants across the UAE, India, Bangladesh and Europe.

Founded in 1989 and headquartered in the UAE, RAK Ceramics serves clients in more than 150 countries through its network of operational hubs. The company is publicly listed on the Abu Dhabi Securities Exchange and has an annual turnover of approximately USD 1 billion.

RAK
CERAMICS

From the world's leading ceramics lifestyle solution provider

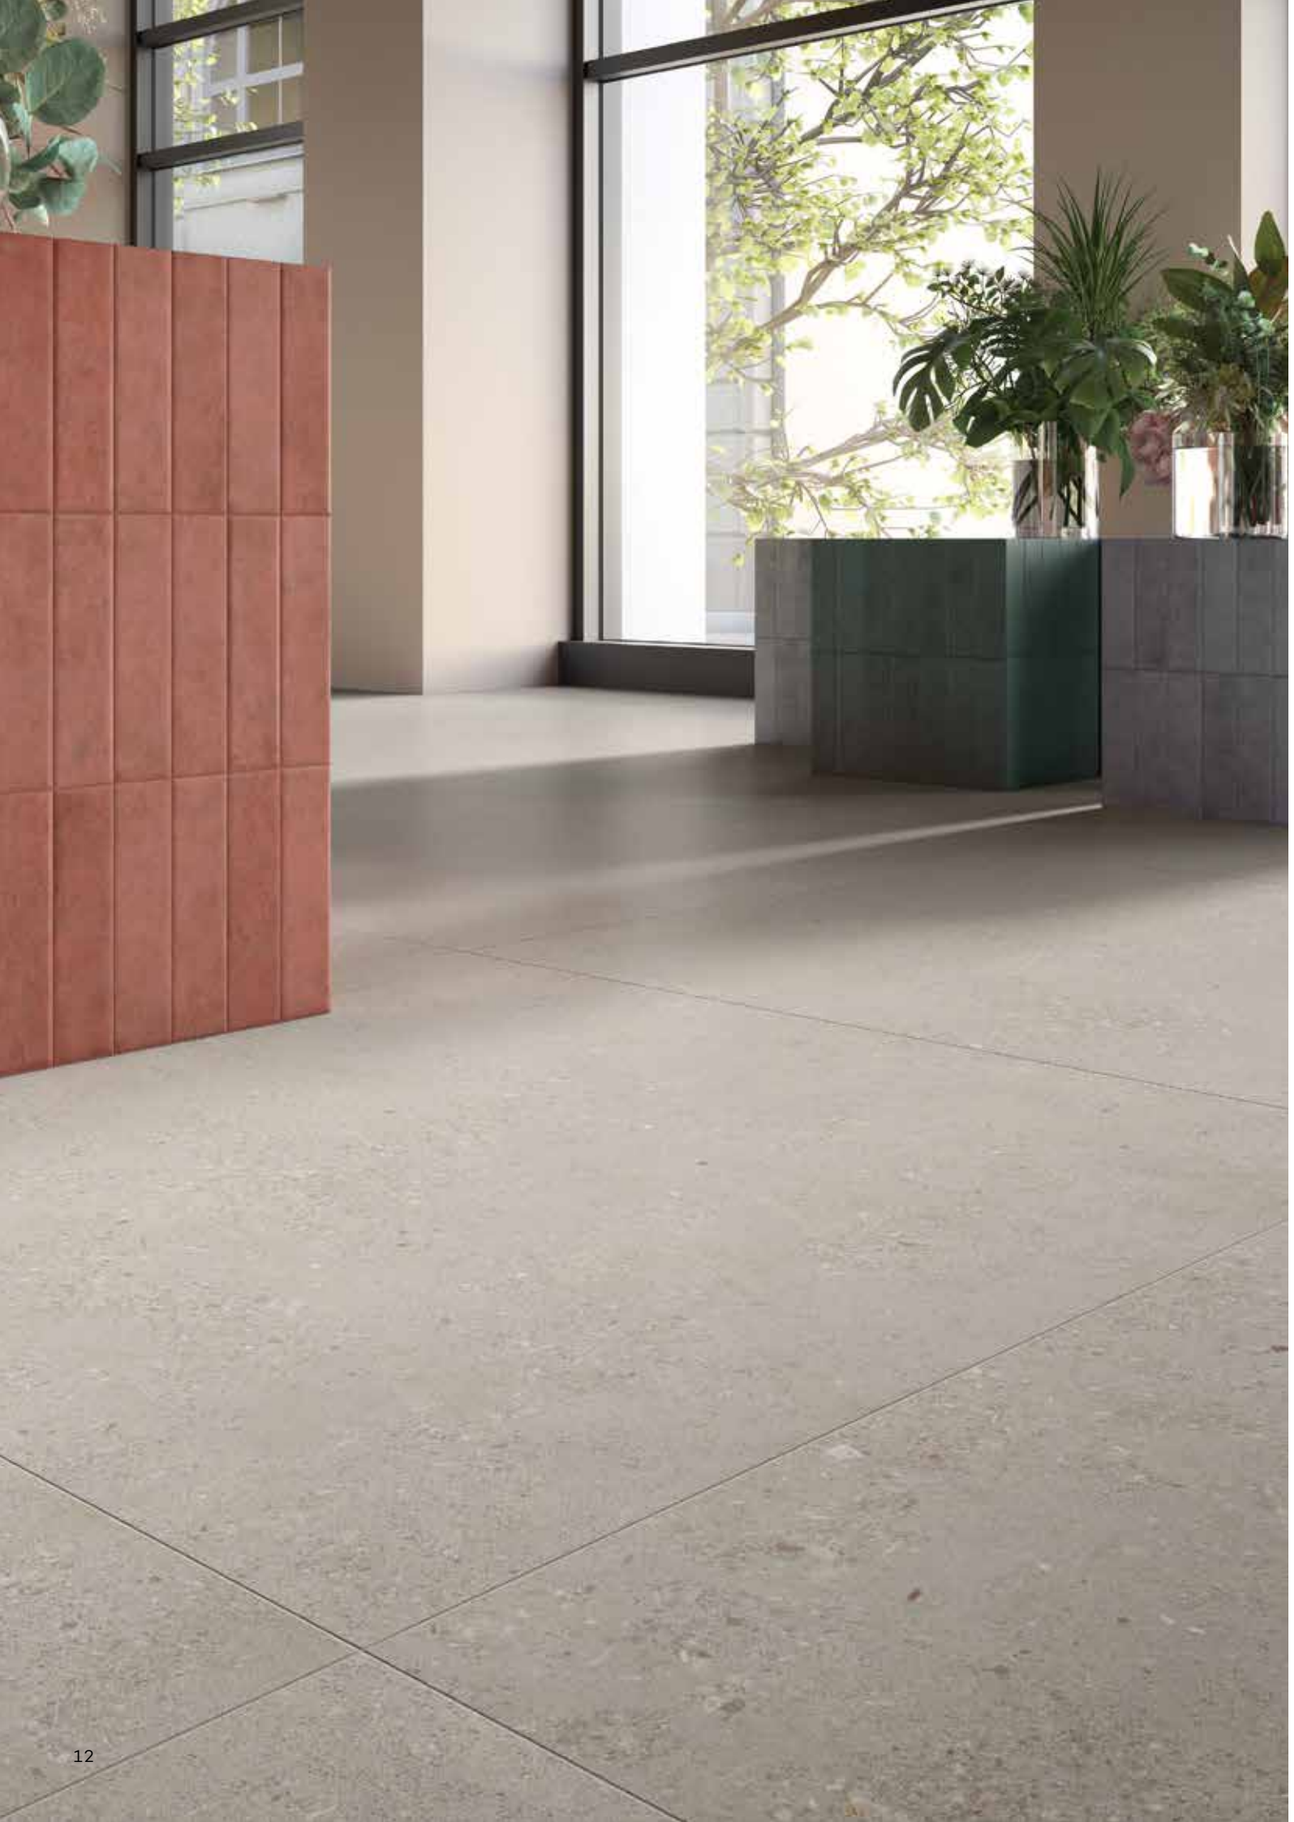

RAK Ceramics helps architects and interior designers create icons and build marvels. It provides sustainable materials that inspire ideas, shapes and hues designed to freely express any style. Unique and inspiring products that realistically resemble natural materials, with unlimited choice.

RAK Ceramics gives porcelain perfection and limitless imagination. Its passion and expertise combined with a careful attention to details enables it to provide designers and end users with a wide range of integrated ceramics solutions, allowing their freedom to be creative and plenty of room for imagination.

RAK
CERAMICS

SURFACES

Concrete

The ultimate expression of minimalism

RAK Ceramics concrete surface collection makes a powerful statement with its sheer simplicity. No fuss, no frills, just pure perfection. With its neutral colour and natural texture, the concrete-look tiles are the ideal choice in creating a minimalist look and feel.

It is a versatile collection that suits well with any settings, either with a contemporary or minimalist mood, or in residential contexts or contract industry.

Resin

The boldness of metal, the charm of resin

A celebration of the dramatic effects and contrasting colours created during the ageing process of raw metal. With a bold and arresting appearance, our Metal collection is perfect for wall and floor, in both urban and industrial settings. The range is completed by spatulated resins, unique in their kind thanks to delicately wavy and irregular textures. An elegant choice, which gives a strong character to the rooms, combined with practicality, hygiene and maximum durability.

Stone

No better way to create a relaxing environment

RAK Ceramics reinterprets the ancestral charm of stone and transforms it to one of the most preferred material in contemporary architecture.

Solid, durable and extremely versatile, the stone-look tiles have special features and highly attractive visual impact. A traditional mood that is able to define interior design projects with a modern appeal. RAK Ceramics' stone collection is inspired by various types of stone existing in nature and is the ideal choice to create a particularly welcoming atmosphere that suits a sophisticated environment, giving a sensation of wellness and relaxation.

Wood

Be inspired by wood effect tiles

Natural-looking tiles are one of the key trends for indoor and outdoor floor and wood is one of the most popular choice thanks to its versatility and beauty. Combining the aesthetic quality of natural timber with the durability of porcelain tiles, wood effect tiles are the perfect option when replacing a floor in a renovation project or laying a new floor in a newly built property, as it helps in creating your own personal style.

Parquet floor tiles can give any room the elegant look of hardwood, in an eco-friendly new way. It's waterproof, highly resistant to scratches and chemicals, easy to clean and resistant to heat and frost. It definitely looks like a good idea!

Redefining Outdoor Living with RAK Ceramics solutions

Give your outdoor spaces a new look. Sustainable and adaptable, porcelain and ceramic tiles are the ideal choice to design or revamp gardens, patios, terraces, driveways or pool areas. The different installation possibilities allows the material to blend in with its surrounding landscape.

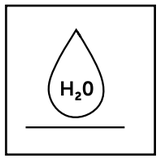

You can choose a 20mm solution, an antislip normal thickness tile, a special antislip A+B+C product or 13/12mm ceramic tiles. Imagine your outdoor space.

TECHNICAL PLUS FACTORS

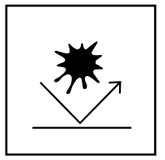

BENDING AND BREAKING STRENGTH RESISTANT

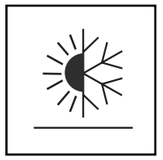

WATER ABSORPTION RESISTANT

FROST AND FIRE RESISTANT

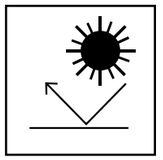

STAIN RESISTANT

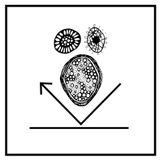

THERMAL SHOCK RESISTANT

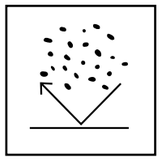

SLIP RESISTANCE R11 - C(A+B+C)

NO DISCOLOURING WITH EXPOSURE TO LIGHT

MOULDS, MOSS AND VEROIGRIS RESISTANT

SALT RESISTANT

KLIMA

INNOVATION AND SUSTAINABILITY

Klima is a new generation ceramic that, thanks to special materials, is able to resist to cold or warm temperatures according to individual needs and to keep the same temperature as the surrounding environment.

KLIMA technology is applied to all RAK Ceramics outdoor products with a thickness of 20 mm.

INDOOR

Klima retains room heat and releases it over the entire surface, producing a warmer feel than a standard floor. Ideal for surfaces that provide a wood-like effect, imparting a warmth and a comfort to be experienced.

OUTDOOR

Klima resists to the heat from sunlight and remains cool and pleasant to walk on with bare feet. Even with significant sun exposure, the surface is not burning hot and floor keeps the same temperature as the surrounding environment.

FAÇADE

On ventilated external façades, Klima helps limit heat dispersion while maintaining a steady indoor temperature. An innovative solution that helps reduce room energy demands.

APPLICATIONS

Dry laying on grass

Dry laying on gravel

Dry laying on sand

Screed with adhesive

Laying as raised paving

The extra thick tiles are ideal for installation on any outdoor areas such as :

Mall and Offices

House exterior garden

Terrace

Swimming pools

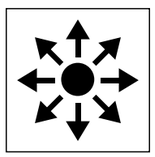

Cafes / Restaurants

Public gardens

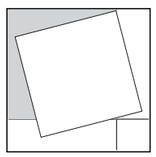

PRACTICAL PLUS FACTORS

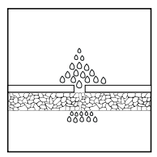

Versatile

Easy to install

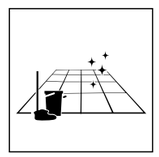

Removable, inspectable and relisable

Effective drainage

Matching indoor and outdoor pavings

Need no treatment and is easy to clean

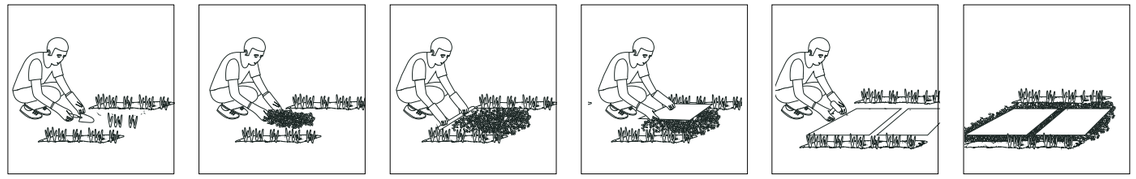

Paths convenent for more than one person

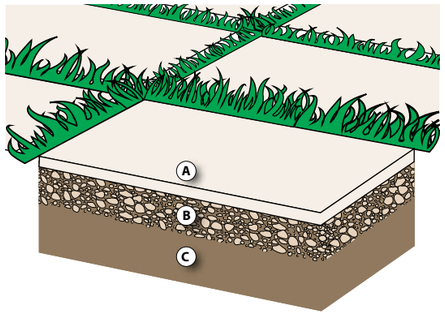

DIRECT INSTALLATION ON GRASS

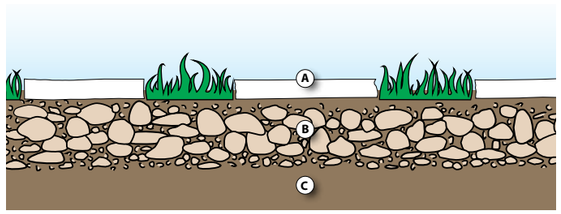

Ideal for: Gardens, gazebos, walkways.

1- Remove the soil below the area where the sheet will be laid to a thickness of about 5-6 cm
2- apply gravel to a thickness of about 3-4 cm and compact the foundation
3- Rest the sheets - with at least 1 cm of gap - on the gravel bed and use a rubber hammer to eliminate any unevenness.

A. Tile
B. Fine gravel or sandy laying bed
C. Ground

LAYING DIRECTLY ON GRASS

Laying with closed joints

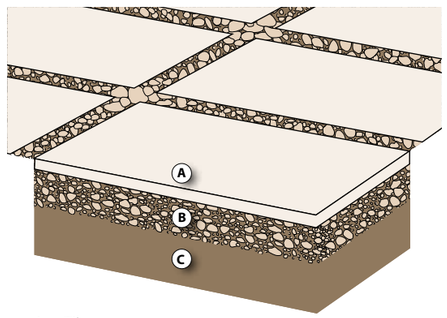

Laying with open joints

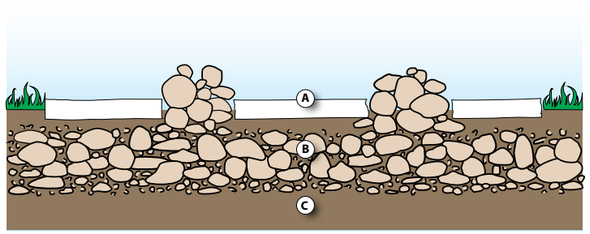

INSTALLATION ON GRAVEL AND SAND

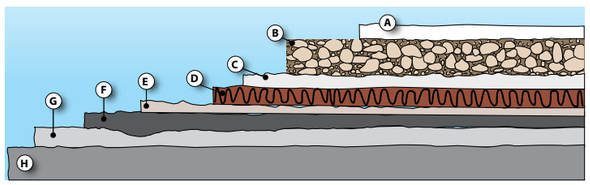

Ideal for: gardens, patios, courtyards, pedestrian walkways, beach resorts, perimeter areas in pools.

1- Compact the level of the resting layer (sand or gravel)
2- Lay the sheet on the bed of gravel or sand, maintaining a minimum gap of 1 cm or wider
3- Use a rubber hammer to eliminate any unevenness
4- Fill in the joints between the sheets with gravel or sand to provide greater stability to the surface

A. Tile
B. Fine gravel or sandy laying bed
C. Concrete screed (may include electro welded mesh)
D. Reinforcement layer
E. Concrete screed
F. Loose stone foundation (gravel)
G. Soil

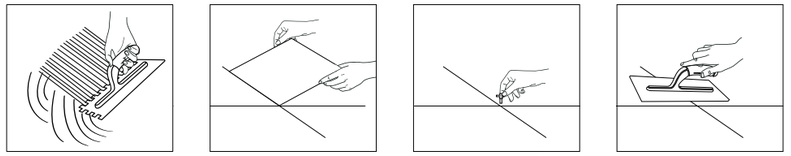

INSTALLATION ON SCREED WITH ADHESIVE

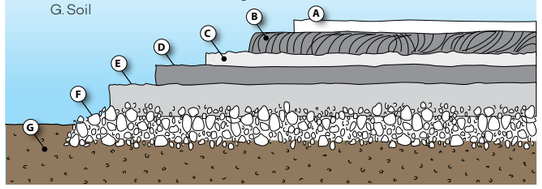

Ideal for: Terraces, indoor areas, high traffic areas

1- Creat a screed to the proper standard, which may or may not be waterproofed depending On requirement.
2- Apply the adhesive evenly(apply to both the screed and the slab if heavy loads are expected).
3- Lay the slabs using cross spacers to creat suitable joints (for unrectified products, a joint of at least 5 mm is requird).
4- Creat expansion and separation joints suitable forthe location and the size of the area to be coverd.

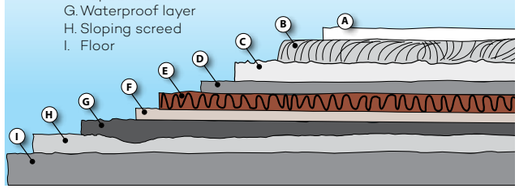

Examples of laying on a soil with adhesive

A. Tile
B. Adhesive
C. Concrete screed(may include electro welded mesh)
D. Reinforcement layer
E. Concrete screed
F. Loose stone foundation (gravel)
G. Soil

Example of laying on a cement with adhesive

A. Tile
B. Adhesive
C. Concrete screed
D. Separation layer
E. Thermal insulation element
F. Vapour barrier
G. Waterproof layer
H. Sloping screed
I. Floor

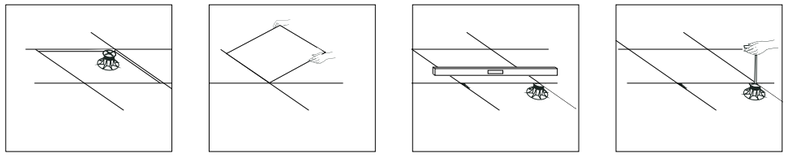

INSTALLATION ON FIXED OR ADJUSTABLE FEET

Ideal for: Offices, Terrace, places to hide pipes or cables.

1- Check that the substrate is flat, firm, rigid and able to support the weight of the paving without deformation.
2- Choose suitable pedestals, polypropylene feet and other system are available in the market
3-Give the surface of the paving a suitable gradint to ensure effective stormwater drainage
4- Follow the instruction of the choosen system

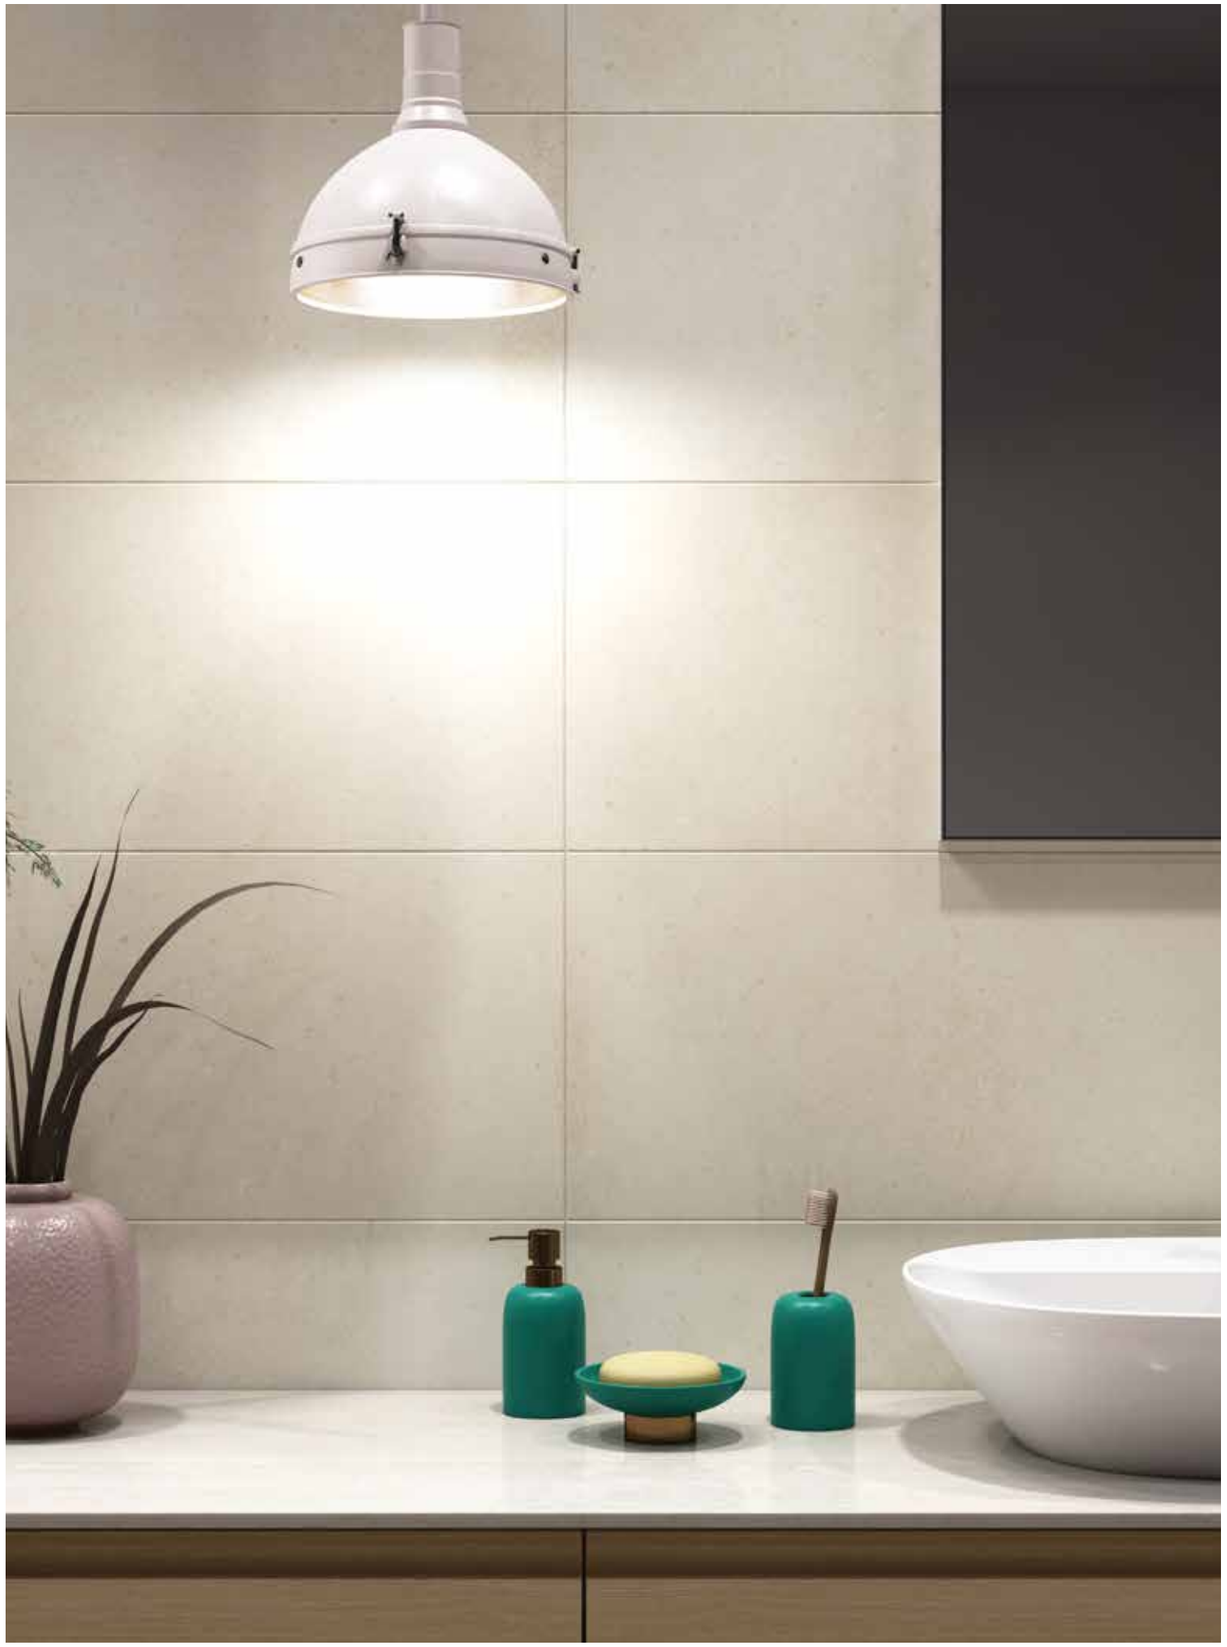

Ceramic Surface

The only limit is imagination

With the continuous innovation in ceramic technology and research, all type of surfaces can now be reproduced : natural wood effect, ceramic wallpaper, metal effect, concrete coatings and more.

Our ceramic tile collections meet the latest trends,
achieving original and eye-catching aesthetic results, with a wide range of structures and colors: from the latest pastel tones to the most intense material effects.

BRICKS&more
THE POWER OF CREATIVITY

Small-size tiles and mosaics are versatile design elements that can add intricate patterns and textures to any space. These tiles are perfect for creating visual interest in smaller areas like bathrooms, kitchens, or accent walls. With their wide range of colors, from neutral tones to vibrant hues, they offer endless opportunities to personalize a room. The variety of finishes, such as marble, concrete, and wood-look tiles, can bring an elegant, industrial, or natural touch to your space. Whether using mosaic tiles for a bold backsplash or small rectangular tiles for a sleek and minimalist aesthetic, these designs can transform spaces by adding both warmth and character without overwhelming the environment. Their ability to fit into different styles, from modern to rustic, makes them a timeless choice in interior design.

Product Guide

Developed by RAK Ceramics lab

Innovation is the heart of RAK Ceramics philosophy and the company is a pioneer in introducing hi-tech innovations that are a breakthrough in the industry and a world leader in the production of ceramic and porcelain tiles ideal for use of indoor and outdoor spaces for wall and floor coverings for residential, retail and industrial projects.

A wide range of technologies are used at the state-of-the-art plants including big slabs pressing technology, advanced digital printing technology for industrial decoration and effects, translucent, double and triple charged feeding systems, digital soluble salts, thermal resistant komfy glaze, slim, anti-microbial, glow in the dark, and other advanced technologies.

RAK Ceramics is known for the wide product range and size range and for its ability to produce bespoke ranges for both small and large scale projects, enabling its clients to bring their idea to life.

INNOTECH

RAK CERAMICS LAB

INNOTECH - RAKCERAMICS LAB

Long lasting love

The soft transition

Antibacterial solution for healthier environment

Antislip technology for indoor and outdoor application

Antislip technology for indoor and outdoor application

Surface capable to absorb and repel heat or cold according to individual needs

Technical and versatile surfaces suitable for any kind of usage

INNOTECH - RAKCERAMICS LAB

3D texture, surfaces, colours in unique materials

Flake Set technology seamlessly blends look of natural stone into tiles

High definition structures using digital technology

Sustainable surfaces and designs made up to 95% of recycled materials

Body through stone and marble veining

Backlighting high tech

Extra matt surface with no glossy

Scratch Guard

Long lasting love

A premium glazed polished surface finish, engineered for enhanced scratch resistance without compromising on gloss and elegance, specifically designed for Maximus. The polished surface features a highly scratch-resistant finish that provides exceptional durability against deep scratches, even from metal objects, making it one of the premium scratch-guard finishes available for porcelain surfaces.

Softech

The soft transition

Softech is the next-generation surface, designed as a single surface for both indoor and outdoor spaces. This innovative surface combines high slip resistance with a soft, tactile feel, making it a game-changer in tile technology by applying micro particles to the tile surface, filling in the surface's microscopic cavities to create a smoother, softer, more uniform surface that is easy to clean. This innovative approach provides both safety and comfort. Softech redefines surface technology, providing a pleasant touch, safety, style and a refined matt, non-reflective elegance.

RAK Sanit

Antibacterial solution for healthier environment

RAK-Sanit is a complete solution that includes porcelain and ceramic tile collections that reduce bacterial contamination and contribute to a healthier living and working environment owing to its antibacterial properties given by silver nitrate compounds.
RAK-Sanit antibacterial collection of wall and floor tiles features antibacterial technology that is permanently integrated into the tile surface. Once bacteria come into contact with the tiled surface, the silver ions initiate the elimination cycle. Silver ions in the antibacterial tile surface bind to enzymes, proteins, cell membranes, and the DNA of the microbe to damage DNA and block reproduction, resulting in the death of the organisms.

Klima

Surface capable to absorb and repel heat or cold according to individual needs

Klima is a new generation ceramic that, thanks to special materials, is able to resist to cold or warm temperatures according to individual needs and to keep the same temperature as the surrounding environment.
When applied to indoor flooring, Klima retains room heat and releases it over the entire surface, producing a warmer feel than a standard floor. When installed on outdoor flooring, Klima resists to the heat from sunlight and remains cool and pleasant to walk on with bare feet. Even with significant sun exposure, the surface is not burning hot and floor keeps the same temperature as the surrounding environment. On ventilated external façades, Klima helps limit heat dispersion while maintaining a steady indoor temperature. An innovative solution that helps reduce room energy demands.
Klima tiles are suitable for indoor and outdoor applications, for flooring or external walls, to achieve maximum comfort with minimum energy impact.

Antislip Barefoot

Antislip technology for indoor and outdoor application

The Antislip Barefoot + technology gives porcelain tiles excellent non-slip performance and a pleasant feel, with a special roughness imperceptible to the touch.
With their technical characteristics that increase the safety and functionality of floors, they are ideal for indoor and outdoor applications for both commercial and residential settings.

High Performance

Technical and versatile surfaces suitable for any kind of usage

With a dedicated production technology able to deliver the most modern high-performing surface solution, a new variety of full-body porcelain stoneware is created. These tiles are produced using the most modern system and quality materials resulting in an extraordinary natural, high-performing variety of porcelain tiles with unique characteristics and limitless applications.
Its natural and structured features make it the perfect solution for architects' and interior designers' contemporary design needs.

3D Shape

3D texture, surfaces, colours in unique materials

3D Shape is a structured effect created through the application of glue (a type of ink) and granules, synchronized with the design or random.
Glue & Granules can be applied either in combination with Digital Structure inks or independently. When glue and granules are used independently, the resulting surface effect delivers a pronounced, projected relief. When combined with digital structure inks, the final surface exhibits both the pronounced, projected relief with an added textured depth.

Flake Set

Flake Set technology seamlessly blends look of natural stone into tiles

The process starts by getting flakes from atomized color body powder. The flakes are blended with the raw clay, which is then molded and fired at high temperatures to ensure the flakes are evenly distributed and firmly set. Perfect for countertops and visible tile edges, FlakeSet technology redefines elegance by beautifully emulating the look of natural stone, now seamlessly integrated throughout the tile.

Sync Effect

High definition structures using digital technology

Sync effect is a high definition digital structure technology. Digital Structure is a relief effect created using ink on the surface glaze or on the tile body surface. It involves a hydro-repellent activity developed with inks that can be synchronized with the design or can be done random, it always results in a textured depth on the surface.

Through Body Veins

Body through stone and marble veining

Through-Body Veining is RAK Ceramics' innovative breakthrough in reproducing natural marble and stone veins that pass through the thickness of the porcelain slab's body. This technology gives porcelain slab a unique design feature, having a consistent marble veining, from the surface to the body until the base - a total synchronization.

Luce

Backlighting high tech

Light becomes a design tool in the hands of the designer with the Maximus Luce translucent slabs, which enrich any environment thanks to its backlighting technology. It is an absolute novelty that will inspire creativity.
With its varied graphics and colours inspired by the most precious marbles and onyx, plus its exceptional feature of transmitting light through, Luce is the perfect solution for sophisticated commercial and residential applications.

Absolute Matt

Extra matt surface with no glossy

Absolute Matt is the most recent innovation developed by RAK Ceramics R&D laboratories, which takes the concept of matte to new heightsby enabling tiles to achieve an extra-matt surface; with zero reflection and a completely non-glossy finish.
Absolute Matt enhances the tile's natural texture and durability, satisfying any design project's aesthetic and functional requirements.

Orbit 3Rs

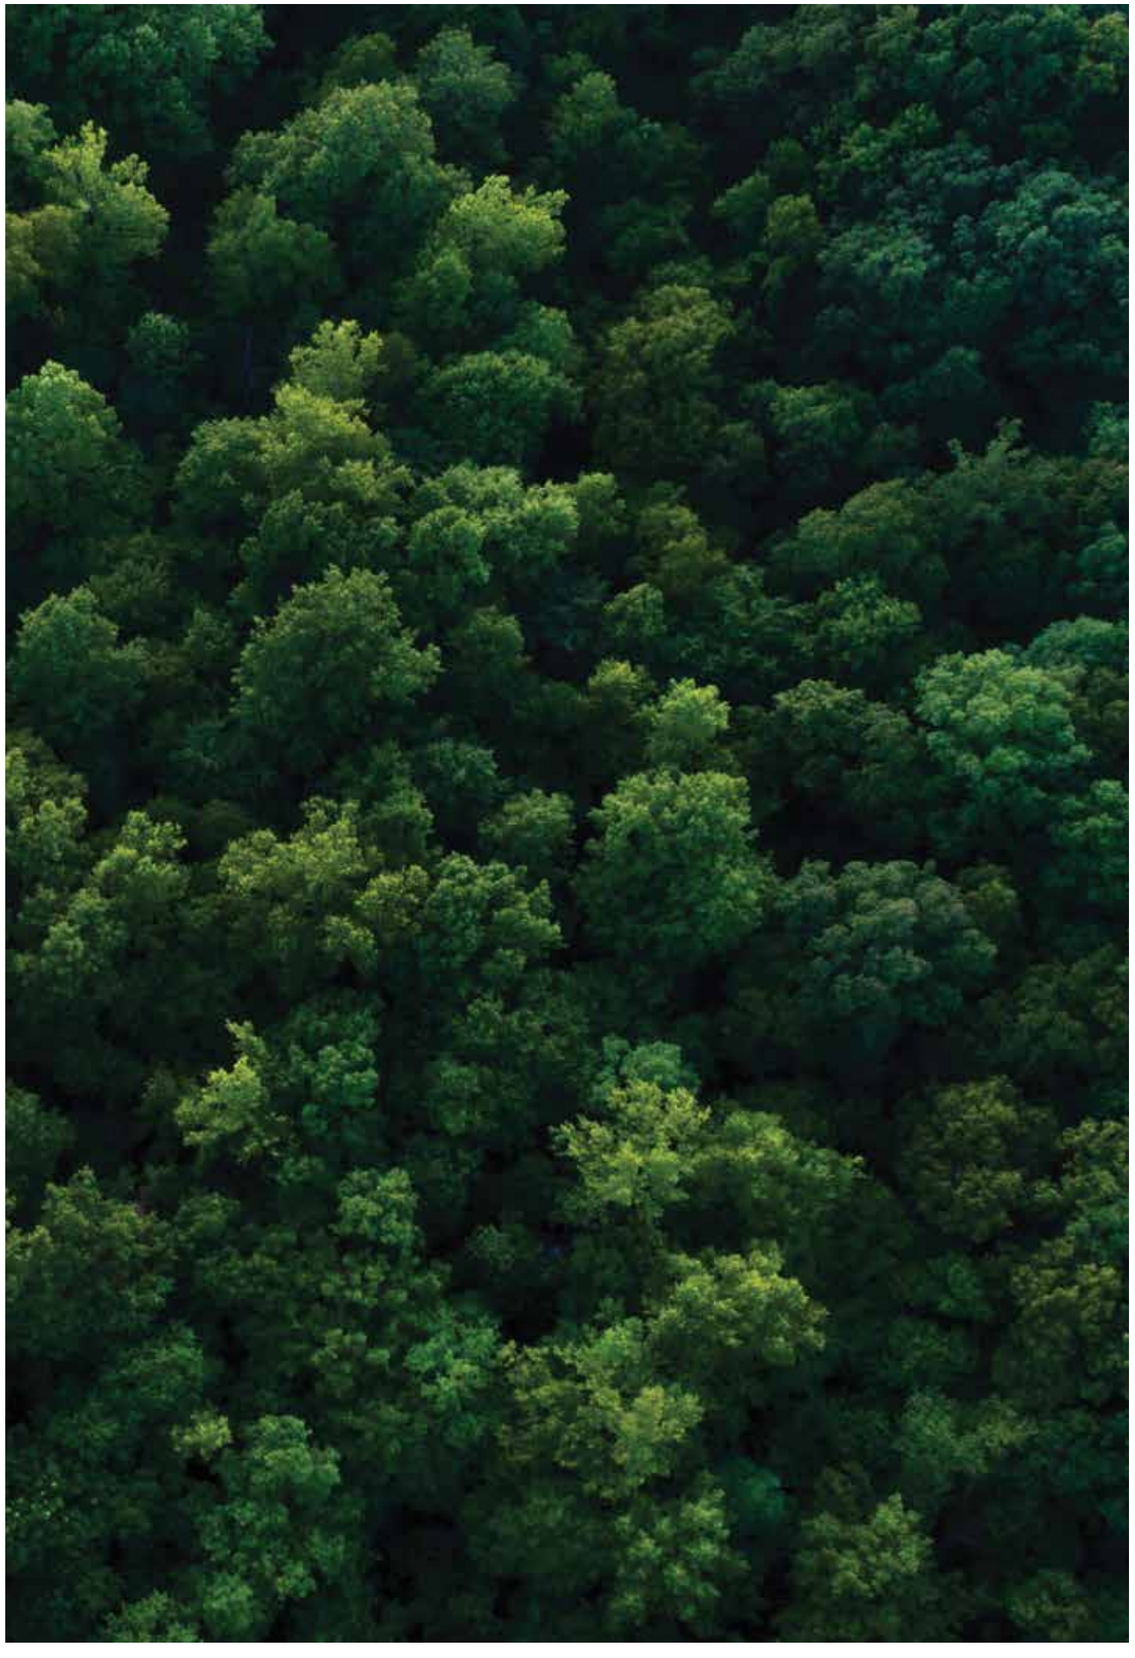

Sustainable surfaces and designs made up to %95 of recycled materials

Orbit 3Rs is one of the latest innovations created by RAK Ceramics R&D laboratories which produces sustainable and high-performance tiles that contributes to the reduce, reuse and recycle concept. The tiles are manufactured with up to 95% recycled materials from wastes generated during the manufacturing process of ceramic tiles.
Orbit 3Rs tiles meet the architectural requirements of environmentally sustainable and durable products, making them ideal for new construction trends and tailoring private homes for both outdoor and indoor environments.

We play our role for a better environment and society

Sustainability in every sphere of business is one of the main elements of RAK Ceramics mission statement. The company is committed to practicing environmental stewardship throughout its manufacturing chain – from product design and efficient operations processes – and to playing an active role in building a better community by enhancing the surrounding environment. Organization's activities improve energy efficiency, reduce pollution, enhance biodiversity and improve the quality of life for both people in the communities it operates in and for its workforce. It recycles natural raw materials to help conserve natural resources and adopts clean development mechanism (cdm) projects to reduce carbon emissions during the manufacturing process.

RAK Ceramics is the first ceramics manufacturing company in its region to produce a global reporting initiative (gri) sustainability and corporate social responsibility (csr) report, based on the latest gri-gr4 guidelines. RAK Ceramics is a founding member of Emirates Green Building Council, which supports the development of sustainable buildings in the UAE.

Quality makes us different

RAK Ceramics was the first company in United Arab Emirates being awarded with **ISO 9001 certification** by internationally recognized UK certification body “CICS” (Ceramic Research Institute Certification Scheme) for ceramics tiles and sanitary wares. Bureau Veritas Certifications verified the implementation of RAK Ceramics’ quality management system and certified the company in compliance with the requirements of **ISO 9001:2015** with the scope covering the design, development, production and supply of ceramics and porcelain floor and wall tiles, slabs and vitreous china sanitary wares.

Bureau Veritas Certifications also certified RAK Ceramics for **ISO 14001:2015 Environmental Management System**.

RAK Ceramics manufactures ceramic tiles according to the latest version of ISO 13006 and/or EN 1441 standards with equivalent ANSI A137.1 American national standard specifications for ceramics tiles.

Its Testing Laboratory is operating in accordance to **ISO/IEC 17025** accredited by NATA (National Association of Testing Authorities, Australia).

Being a corporate member of EGBC (Emirates Green Building Council), RAK Ceramics supports the promotion and development of sustainable buildings in United Arab Emirates.

RAK
CERAMICS

A track record of expertise

RAK Ceramics' products feature in a wide range of projects: from private residential interiors to some of the most iconic buildings in the world. From the Burj Al Arab, Atlantis on The Palm and Ferrari World, to Dubai Duty Free, Wembley Stadium, The O2 Arena, Mercedes Benz Showrooms, Airports, Residential Developments and Shopping Malls all over the world.

TECHNICAL FEATURES

PORCELAIN TILES (BIa - GL) :

Porcelain tiles are manufactured using pure, selectively imported raw materials mixed using the most advanced extraction and sorting techniques; they are obtained with a production process similar to that of single-fired tiles. The resulting product is top-quality porcelain tile, obtained by raw materials wet grinding, followed by partial drying by spraying, silo storage to allow homogenization of properties, and pressing with highly efficient hydraulic presses up to specific pressures more than 500 kg/cm2. The high pressure combined with high firing temperature exceeding 1200 °C results in highly compact & strong ceramic surface with very low water absorption (lower than 0.4% according to UNI EN ISO 10545-3 standard test method) and extremely high mechanical resistance (average value exceeding 40 N/mm2 according to UNI EN ISO 10545-4 standard test method). Thanks to their low porosity, these porcelain tiles are frost-proof and rated as belonging to the BIa GL class according to the International Standard ISO 13006 and European Standard UNI EN 14411 which requires water absorption ≤ 0.5%.

RAK Ceramics porcelain tiles are available in a wide range of designs, sizes and finishes.

ADVICE ON LAYING

Although our porcelain tiles can be installed using traditional cement mortars, we advise using modern adhesives. While installing on wall, the two-layer spreading system is recommended to perfectly wet the back of the tile. Quickly dipping each tile in water before installation will remove any dust on the back of the tile for perfect adhesion. Do not wet the tiles if you are using vinyl, acrylic resin adhesives or two-component organic-solvent based adhesive. It is advisable to incorporate suitable shrinkage - flexion joints (movement/ expansion joints) when installing on large floors: the joints should never be spaced more than 4 - 5 linear meters apart indoors and 3 linear meters apart outdoors. Be careful while using strong coloured grouts as they might leave stains on the surface of the tiles that may be difficult to remove later.

TECHNICAL CHARACTERISTICS - PORCELAIN TILES (BIa - GL)

Note : Shade variation across the batches is inherent to the manufacturing process and the pre-laying colour comparison is recommended

TECHNICAL FEATURES

FULL BODY PORCELAIN TILES (BIA - UGL) :

Full body porcelain tiles are manufactured using pure, selectively imported raw materials mixed using the most advanced extraction and sorting techniques; they are obtained with a production process similar to that of single-fired tiles. The resulting product is top-quality porcelain tile, obtained by raw materials wet grinding, followed by partial drying by spraying, silo storage to allow homogenization of properties, and pressing with highly efficient hydraulic presses up to specific pressures more than 500 kg/cm2. The high pressure combined with high firing temperature exceeding 1200 °C results in highly compact & strong ceramic surface with very low water absorption (lower than 0.1% according to UNI EN ISO 10545-3 standard test method) and extremely high mechanical resistance (average value exceeding 40 N/mm2 according to UNI EN ISO 10545-4 Standard test method). Full body porcelain are suitable for heavy traffic areas as they are characterized by a deep abrasion resistance (equal to 150 mm3 of removed material, as opposed to the 175 mm3 provided for by the UNI EN ISO 10545-6 standard test method). Thanks to their low porosity, these tiles are frost-proof and rated as belonging to the BIa UGL class according to the International Standard ISO 13006 and European Standard UNI EN 14411 which requires water absorption ≤ 0.5%. Chemical acid and base resistance (UNI EN ISO 10545-13 standard test method) makes full body porcelain tiles suitable for environments where aggressive chemicals are used, e.g. food processing factories, hospitals, chemical or pharmaceutical plants. The full body porcelain tiles are available in a wide range of sizes and surfaces (slip-resistant finish also available).

ADVICE ON LAYING

Although our full body porcelain tiles can be installed using traditional cement mortars, we advise using modern adhesives. For large sizes over 40x40cm, outdoor and wall installations, the two-layer spreading system is recommended to perfectly wet the back of the tile. Quickly dipping each tile in water before installation will remove any dust on the back of the tile for perfect adhesion. Do not wet the tiles if you are using vinyl, acrylic resin adhesives or two-component organic-solvent based adhesive. It is advisable to incorporate suitable shrinkage - flexion joints (movement/ expansion joints) when installing on large floors: the joints should never be spaced more than 4 - 5 linear meters apart indoors and 3 linear meters apart outdoors. Be careful while using strong coloured grouts as they might leave stains on the surface of the tiles that may be difficult to remove later.

TECHNICAL FEATURES

RED BODY AND WHITE BODY CERAMIC TILES (BIII):

Red body and white body Ceramic tiles are made with finest quality clays and with chamotte (a ceramic raw material with high percentage of silica). These raw materials are submitted to dry grinding and suitably mixed and wet and then pressed with hydraulic presses. Quick-cycle support firing is obtained via roller kilns reaching temperatures of approximately 1130 °C. After biscuit glazing, the vitrified product is sintered in a single-layer roller kiln at approximately 1030 °C. The resulting wall tiles have an average bending strength that is higher than 16 N/mm2 in accordance with the UNI EN ISO10545-4 standard test method and a water absorption level that is higher than 10 %; they belong to the BIII (GL) group according to the International Standard ISO 13006 and UNI EN 14411 standard. This class of products shows virtually no shrinkage during firing; therefore such dimensional consistency results in extremely easy laying.

ADVICE ON LAYING

Ceramic Red and White body tiles can be laid using either tile adhesives or cement mortar. Under no circumstances should the tiles be wet before laying when using acrylic or vinyl resin based adhesives or two- component organic solvent based adhesives. When laying large sized tiles it is best to adopt the two layer spreading method and, when the laying surface is very large, to provide for suitable expansion joints which must not be spaced more than 4-5 linear meters apart from one another.

IMPORTANT POINTS TO REMEMBER WHILE LAYING THESE TILES

When laying on wet concrete or plaster, leave to dry for at least one week for each centimetre of thickness. When laying on brick, never lay on tile adhesive measuring more than 4-5 mm in thickness. For laying on flexible supports (for example plasterboard panels, polymer panels, etc.) which may result in movement of the tiles, we advise laying on tile adhesive measuring no more than 2-3 mm in thickness and to use class C2 or D1 glues. For laying on waterproof brick, which prevents the release of damp, we advise laying on tile adhesive measuring no more than 3 mm in thickness and to use class C2 or D1 glues. Avoid laying without expansion joints or joints where stress due to expansion is released directly onto the tile.

TECHNICAL FEATURES

GRES WHITE BODY TILES (BIIA) :

Gres white body tiles are created by mixing raw materials including high quality white or red clays, quartz and feldspar in wet grinding ball mills. After grinding, a clay-based suspension of these materials called a slip is fed out of the mill then spray-dried to remove excess moisture. Following the spray drying process, the free flowing powder is pressed using advanced hydraulic presses with a specific pressing power exceeding 300 kg/cm2 in order to obtain a compact gres body. Once dried, the tiles are coated and decorated with glazes to make them aesthetically pleasing and meet our customers design requirements. The glazed tile body is then fired in roller kilns where temperatures of approximately 1200 °C are reached. The resulting product is normally a medium-to-low porosity (3% to 5%) tile, in compliance with the International Standard ISO 13006 and European Standard UNI EN 14411 standard and rated as belonging to the BIIa GL group with notable technological specifications such as the product flexural strength (average value: 30N/mm2 according to UNI EN ISO 10545-4 standard test method). As for wear resistance, this will depend on the type and colour of glazing and may change according to different products or collections. As a general rule, bright finishes are not recommended for heavy traffic floors or rooms opening onto outdoor areas, where sand or other abrasive materials are more likely to be brought in.

ADVICE ON LAYING

Our gres white body tiles can be laid using either traditional cement mortar or modern tile adhesives. When laying large size tiles, it is best to adopt the two-layer spreading system to ensure the adhesive is spread over 90 % of the tile surface. Quickly dipping each tile in water before installation will remove any dust on the back of the tile for perfect adhesion, however, do not wet the tiles if you are using vinyl, acrylic resin adhesives or two-component organic-solvent based adhesive. It is advisable to always incorporate suitable shrinkage-flexion joints (movement/expansion joints) which must not be spaced more than 4-5 metres apart from one another. These joints must be inserted not only between the tiles, but also reach the levelling compound below, consisting of either cement mortar or dry compound, depending on whether the tiles are set in the traditional manner or using a modern adhesive. The movement joints must be sealed with appropriate materials such as silicone or polyurethane-based sealants, depending on the anticipated traffic of the application area. Appropriate tile bedding layers should be used such as underlay, damp course, vapour barrier or any other layer necessary to prevent the tiles from detaching themselves or cracking due to water penetration.

MAINTENANCE AND CLEANING OF TILES

Maintenance of ceramic and porcelain tiles on dry surfaces is relatively easy. RAK Ceramics tiles are highly scratch and stain resistant.

- By regularly sweeping the floor, you can help avoid scratches that small pebbles or sand can create.
- Make it a habit to always wipe the soles of your shoes on a mat before entering the house. Thoroughly wipe up any spills using plain warm water.
- While they are not likely to stain your ceramic tiles, spills may stain the grout between the tiles and if they are left to sit for too long, may also stain the actual tiles.
- Plain water is the ideal cleaner because it leaves no residue if you dry the surface of the tiles thoroughly after cleaning.
- If tiles are left wet after cleaning, there may be some unsightly mineral residue after the water dries, but this can easily be removed by spot cleaning.
- If stains resist cleaning with water alone, you can use a mild acidic solution, such as white vinegar. Use it highly diluted and rinse with plain water then dry.
- As food stains are acidic in nature, try using a mild alkaline solution.
- Use common detergents sparingly, rinse with plain water and dry thoroughly.

TILE-LAYING RECOMMENDATIONS

- All RAK Ceramics products are subject to size and shade variations. Please check the size, batch number, caliber, tone, choice, colour, quality of the pieces before the installation, as no claims will be accepted once the tiles are installed.
- Place some tiles on the floor - 2 or 3 sqm - and check the overall technical and aesthetic characteristics with care and check if there is enough product to finish the work.
- Manufacturer's responsibility is only limited to replacement of defective material if any, prior to fixing of tiles and we will not entertain claim of any nature after the tiles are installed.
- Therefore, if any issue is found on the delivered product, the contractor for installation or the client should not install the tiles. The issue should be communicated to RAK Ceramics for investigation and further action for resolution as required.
- The substrate must be a compact cement bed. Levelling system ensures flatness between tiles avoiding movements during the mortar setting. This reduces the time for the ceramic laying obtaining a perfect lippage-free finish. Avoid movements between the tiles due to the mortar setting.
- The width of grout joints must be established by the installation supervisor, unless grout widths are regulated by national laying standards. The grout colour should be selected according to the colour of the tile. We recommend to select a matching colour. Before using fine-grain coloured grout on lapped, polished or brushed products, always test it. If the pigment is very adhesive, it may be very difficult to remove.
- We recommend to lay the tiles by using suitable adhesives for each kind of product and surface. As general rule, tiles must be installed in the same position. The minimum joint is 2 mm for rectified tiles, although we suggest a higher joint for big size products. After grouting, remove any excess product as quickly as possible by repeatedly washing the area with a sponge and water.
- Steps to follow 1. First, set the tool to the scale according to the ceramic thickness. 2. Introduce the crossheads and continue laying the adjacent tiles. 3. Put the wedges in the crosshead manually. 4. Tighten the wedges with the pliers to level the pieces. 5. Allow for setting for the time recommended by the manufacturer of the adhesive cement. 6. Remove the crossheads. Hit the crosshead with a rubber mallet or with your foot in the direction of the joint. Do not hit the wedges.
- The company will not accept any claim if this is due to the problems caused by not following these suggestions and instructions.

GUARANTEES AND COMPLAINTS

The quality of the ceramic material is defined on the basis of the prevailing international regulations applicable to the corresponding product class. RAK Ceramics guarantees only goods supplied as prime quality. Complaints relating to goods other than of prime quality ("B" quality, commercial, second, third, secondary, stock, etc.) shall not be taken into consideration, nor will any kind of guarantee be given, either implicitly or explicitly, on these materials. The Purchaser is obliged to check the goods in terms of quality and quantity within a short time after receipt and, in the case of a complaint, to give notification of this in writing no later than 8 (eight) days from receipt of the goods; failure to do so will incur the forfeiture of all rights.
Material deemed to be defective must be held at RAK Ceramics's disposal for the checks that it will consider suitable to carry out; any further action (return, repair or other) must be authorized in advance by us in writing. Complaints and requests for intervention under guarantee after the material has been laid shall not be taken into account if the defect reported is evident (e.g. chips, defects of size, differences in colour shade, etc.). It is made clear that the prime quality may contain defective tiles up to a limit of 5% and that the colour shades of the material supplied may differ from the sample displayed, since ceramic is intrinsically variable in appearance. Complaints attributed to latent faults or defects must be formalized in writing within 8 (eight) days from their discovery and, in any case, within one year from delivery; failure to do so will incur the forfeiture of all rights under the guarantee and to compensation. As well as the invoice details, the notification must contain a precise description of the defect and an estimate of costs for repair or modification of the product; failure to notify this data will cause the complaint to be deemed invalid.
If the complaint should prove to be unfounded the Purchaser must reimburse RAK Ceramics for all the expenses incurred for assessment (travelling expenses, surveys, etc.). RAK Ceramics's obligation is, in any case, limited to replacing the defective pieces only or to repairing them, with the express exclusion of other, further indemnities such as, by way of a non-limiting example, for costs of removing and re-installing furniture, equipment, machinery, etc., or loss of earnings for interruption or suspension of business, inconvenience, consequential damages, etc. The presence of defective tiles does not invalidate the quality of the entire supply, nor does it incur the obligation for its entire replacement. Conditions applied by the company.

ICONS

COLOUR VARIATIONS

V1 EVEN

The least amount of shade variation attainable.

V2 LIGHT

Light to moderate shade variation within each carton.

V3 MEDIUM

Medium to high shade variation within each carton.

INDICATIONS FOR USE

WALL TILES

FLOOR TILES

SUGGESTED APPLICATIONS

DOMESTIC PURPOSE

Residential areas, hotel rooms, bathrooms

LIGHT COMMERCIAL TRAFFIC AREA

Indoor public areas subject to medium pedestrian traffic such as restaurants, bars, offices, shops, hotel public areas, convention rooms.

OUTDOOR

Outdoor public environments subject to medium pedestrian traffic such as outdoor terraces, stairs, corridors, raised paving, private garden, swimming pool and wellness areas.
Always check the slipperiness characteristics according to the intended environment, in conformity with applicable regulations or laws.

HEAVY COMMERCIAL TRAFFIC AREA

Industrial floors such as warehouses, deposits, factories.

R RATING

R9

indicates a normal grip with an inclination plane from 3° to 10°

R10

indicates a medium grip with an inclination plane from 10° to 19°

R11

indicates a high grip with an inclination plane from 19° to 27°

CLASSIFICATION	TYPICAL APPLICATIONS	MEAN CRITICAL ANGLE VALUE
Class A	Barefoot, but mainly dry aisles and walkways, dry changing areas.	≥ 12 °
Class B	Shower rooms, pool surrounds, wet changing areas (plus all areas covered by Class A).	≥ 18 °
Class C	Areas constantly under water, e.g. steps into pools, foot baths, inclined pool surrounds, Jacuzzis (plus all areas covered by Class A and B).	≥ 24 °
