What is ABSOLUTE?

It is the unique combination of same solid colour of the top decorative surface and the body of the tile, thus giving uniform look to the tile from top to bottom.

5 Stars performances

Resistant to heat Easy to clean Highy resistant to breaking load Resistant to freeze Versatile High quality raw materials

The design possibilities are endless.

Imagine a tiled space with virtually no grout lines. Imagine limitless possibilities for your sufaces and unparalleled flexibility for any kind of applications. Heat resistance, recyclable, light weight, durable and easy to clean. Maximus is the best answer to the most challenging architectural and interior design needs.

ABSOLUTE COLLECTION COUNTERTOP SOLUTIONS

Experiments beyond imagination

The slabs by Maximus lets you experiment with different applications and bring your imagination to life. Its large size lets you cut it and fit it into different spaces like furniture and countertop other than just walls and flooring.

MAXIML

Creating extremely durable material

The new generation Sintering technology used to highly durable

ABSOLUTE, Sintered **compact surface!**

Before Sintering

The Sintering technology replicates the process in just a few hours by which stones are naturally created over a period of thousands of years.

It consists of subjecting the raw materials to very high pressures and temperatures and represents an accelerated version of the metamorphic changes that natural stone undergoes when subjected to high temperature & pressure over thousand years.

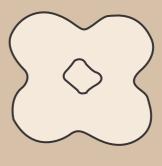

Why Sintering?

Compact

it makes the tile extremely compact, ie. densification of material takes place.

Elasticity/Resilience

Advantages : Elasticity/Resilience Definition: Plasticity/pla'stiSiti Noun: The quality of being easily shaped or molded

After Sintering

This breakthrough process successfully removes the tension existing within the tile, thereby creating a unformly large slab that can be easily cut or trimmed with precise accuracy.

The molecules of the raw materials difuse together when subjected to high pressure and temperature, thus creating a single body one solid piece. This results in consolidating the powdery structure (during manufacturing) of tiles and thus reducing the porosity of the material.

- Densification makes the tile significantly porosity free.
- This results in water absorption less than 0.08%
- Requires low maintenance.
- Longer life.

Rubber Grout floats

Slant ridge notched trowel

Diamond for edge and side polishing

CLEANING AND MAINTENANCE

Brooms

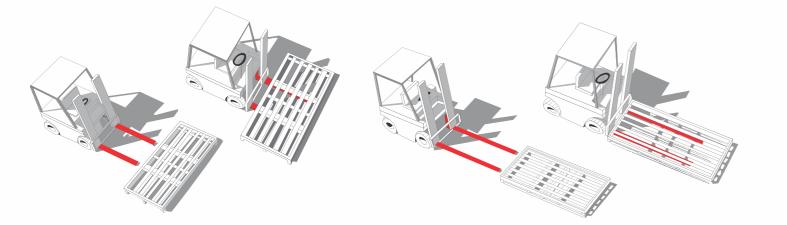

Floats with abrasive pads

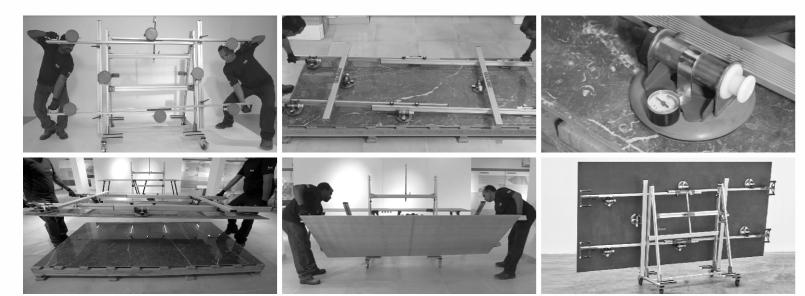

TECHNICAL MANUAL

Handling Maximus

- Maximus extra-large format slabs arrive in oversized crates, which require speciic Handling equipment to prevent from damage occurring during forklift operation, speciic fork sizes must be used. For example, to handle a crate of 135cm x 305cm tiles from the side, 112cm/ 44" long forks are recommended.
- To handle the same crate from the narrow end requires forks that are at least 213cm/ 84" long. Lifting multiple crates with longer forks may require forklifts with a greater lift capacity.
- Specialized tools and equipment are currently available for the handling, installation and cutting of large Vitrified surfaces. Innovative trowels with unique notch conigurations can help increase the consistency of the mortar coverage on the back of the tile.
- To increase rigidity and limit twisting, use a system composed of parallel and transverse guides.
- For a perfect adhesion clean the slab and the sukers with a damp spongue.
- The suckers run along the guides and adhere to the slab. Make sure that a vacuum is created between the device and the surface.
- A single guide device can be used for sizes of maximum length.
- Use four operators at a time to carry out handling operations of large size slabs.
- Lift the slab along the long side and hang it vertically to the handles of the frame.
- For the large size slab a suitably reinforced trollry is recommended. Set the guides to the trolley for carrying the slab.
- Follow the same procedure for handling the 120x240cm and all other sub-sizes, where ony two operators are su cient.

Cut-to-pieces and drilling

- this case inish with a diamond-polishing pad.

• RAK Ceramics recommends the use of special designed devices for handling as well as cutting and laying of big slabs.

• Handle slab with a proper and professional trolley of aluminum parallel proile with crossbars and vacuum suction cups along with a vacuum gauge. Please use double suction cups for slabs above 300cm. This could make sure that appropriate vacuum is created between the device and the slab. Lift the slab and keep it vertically to the trolley frame.

• Keep the slab on a stable, lat and intractable surface. For successful cutting and drilling, RAK Ceramic recommend using a professional modular workbench with aluminum proiles and proper cutting tools for each type of cut.

• Set the cutting unit on the tile so that the references coincide with the marked lines and lock it with the appropriate suckers. Score the slab from one edge to the other, being carefully maintaining the same pressure while moving.

• When the cut has been made, move the slab until the slit line sticks out a 10 to 15 cm from the workbench. Start hew from both sides using appropriate cutting-of pliers and follow the scoring line to complete the hew.

• Smooth rough edges and sides with an appropriate diamond polishing pad.

• To drill internal cutouts from the slab, irst you need to draw the guide lines. For circular cuts, use the compass device with suction cups. For rectangular cut, drill irst a 5 – 7 mm hole at the corners of the rectangle shape, using a non-percussion drill. For a better drilling always, keep the surface and drill a little bit wet. Then Follow the drilled lines using a diamond-blade angle grinder and then inish of the edges with a diamond-polishing pad. Round holes (4) must be made in wet drilling, using diamond-blades. Start engraving the surface with a 75 degrees point angle, then straighten out the drill avoiding excessive pressure on the slab. Also, in

• Manual traction devices are available, in order to make a inishing cut at 45° and thus enable special applications of the material.

Cleaning And Maintenance

Maximus products are non porous (due to their high quality raw materials, stringent production parameters and state of the art technology), hence any dust or deposited waste cannot penetrate the surface. For most cases only a damp cloth is su cient for cleaning. Regular cleaning highlights the aesthetic features of the surface and gives it exceptional shine. For highly aggressive cleaning caused by some common food and substances follow the table below.

TYPE OF STAIN	CHEMICAL PRODUCT	EXAMPLE
Grease	Alkaline - Solvent	Detergent
Oil	Solvent	Ammonia
Ink	Oxidant - Solvent	Alcohol
Rust	Acid	Hydrolic acid
Lime	Acid	Descaling products
Cement	Acid	Hydrolic acid
Wine	Alkaline	Ammonia or Bleach
Cofee	Alkaline - Solvent	Ammonia or Bleach
Rubber	Solvent	Alcohol
Plaster	Acid	Hydrolic acid
Candle wax	Solvent	Alcohol
lodine	Oxidant	Bleach
Blood	Oxidant	Bleach
lce cream	Alkaline	Detergent
Resins	Solvent	Alcohol
Fruit juices	Oxidant	Bleach

Disclaimer: The aim of this manual is to ofer helpful suggestions about handling and maintaining Maximus mega slabs. Due to nature of sintered ceramic material, it is highly advisable to consult an expert for these purposes. RAK Ceramics cannot be held responsible for any damage resulting from using the information and suggestions contained in this technical manual.
