

DUBAI AIRPORT

Background Dubai International Airport is considered to be one of the busiest international airports in the world. As the rapid growth continues, the airport will increase capacity to accommodate 70 million and then 100 million passengers a year by 2016 and 2025 respectively. As part of this expansion plan, the third concourse was completed in 2012 and was designed exclusively to handle the Emirates A380 Superjumbo fleet. **Scope** This large-scale project required world-class design, equipment and accessories to match the already luxurious standards set by Dubai International Airport. Encompassing 11 floors with 50 airline counters, an 11,000 square meter retail area, a 32 room five-star hotel, a 170 room four-star hotel, two restaurants and two food courts. RAK Ceramics supplied a range of tiles to meet the needs of such a large-scale, project. Tiles chosen were selected for their durability, superior breakage Strength and aesthetics. **Results** Being a fast-track project, RAK Ceramics committed to dedicating a whole production line to manufacture the tiles. By doing so, RAK Ceramics ensured that the production process would be smooth, timely and maintain the high quality associated with our products. The client was extremely satisfied and RAK Ceramics is proud to add Concourse Three, Dubai International Airport to their growing list of high profile projects.
