

THE WAVE

Background The Wave, Muscat is Oman's premier residential project, a large community development offering freehold status to all purchasers – Omanis, GCC nationals and expatriates alike. A joint venture between Majid Al Futtaim Properties and the Government of the Sultanate of Oman, The Wave won the award for Best Architecture at the 2009 CNBC International Property Awards. **Scope** The Wave combines more than 4,000 beautiful properties, a 400-berth marina, golf course, four premier hotels and new retail, leisure and dining opportunities all situated at a seafront address. This was the first integrated resort and residential development to be undertaken in the Muscat region and it required high quality tiles that complemented the magnitude of the project. A grand total of 160,000 square meters of tiles have been supplied to this urban community project through RAK Ceramics Muscat based trade partner, Bawan Building Materials. **Results** The Wave Muscat is another landmark amongst the RAK Ceramics portfolio of prestigious residential projects. RAK Ceramics offered a variety of products in terms of size, color and shade to meet the specific requirements of the developer. RAK Ceramics vast industry experience and use of advanced technologies using the latest in print and design meant we were able to provide The Wave with the large quantity and variety of tiles required within the specified timeframe.
